PROJECTS

CareerVault – Job Tracker App (In Progress)   **July 2025**
Tech Stack: React, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Clerk Auth, Multer, Sentry, Vercel

- Engineered a MERN-based job portal with role-based Clerk authentication, enabling secure job search, online applications, resume uploads (Multer), and recruiter-driven application workflow management.
- Designed and deployed scalable RESTful APIs with Node.js and Express.js, integrating Sentry for proactive error tracking, performance monitoring, and MongoDB query optimization to enhance reliability.
- Delivered a responsive, accessibility-focused frontend using React and Tailwind CSS, optimized for performance, and deployed to Vercel for seamless global access.

MediFlow: Smart Supply, Seamless Care   **May 2025**
Tech Stack: React, Vite, Tailwind CSS, React Router, Node.js, Express, MySQL, JWT, Chart.js

- Spearheaded the end-to-end design of a hospital supply tracking system using React, Node.js, and integrating automated low-stock alerts and reorder workflows, resulting in a 30% reduction in stockouts.
- Built a real-time supply dashboard interface that reduced manual entry errors and enabled faster stock-level visibility for hospital staff.
- Advanced care delivery efficiency through the strategic deployment of automated stock management systems, ensuring optimal resource availability.

Beatwell: Heart Disease Prediction System   **April 2025**
Tech Stack: Figma, Python, Flask, Scikit-learn, AWS

- Engineered a heart disease prediction web app using Flask and Scikit-learn, integrating a Random Forest model for real-time inference on clinical data.
- Achieved ~87% accuracy using a Random Forest model trained on 13 features from the UCI Cleveland dataset (80/20 split); deployed frontend via AWS Amplify.
- Integrated CI/CD workflows via GitHub for automated builds and deployments on AWS Amplify, ensuring consistent version control and seamless feature rollouts.
